👤 PROFESSIONAL SUMMARY

Results-driven Software Engineer with over 6 years of experience specializing in backend development using Python and TypeScript. Skilled in modern frameworks such as Django, FastAPI, Strawberry GraphQL, and Nest.js, with hands-on exposure to Go and Rust. Proven track record in delivering scalable software solutions across fintech, blockchain, and e-commerce industries. Experienced in frontend technologies like Next.js and Tailwind CSS, contributing to full-stack project development. Passionate about clean architecture, automation, and building performant, maintainable systems.

In addition to software engineering, I've actively contributed to DevOps initiatives—designing and maintaining infrastructure on Azure Cloud, automating deployments with CI/CD pipelines, and managing containerized environments with Docker and Kubernetes. I also built a fully self-hosted home lab, gaining practical experience in server management, networking, and security best practices.

🧠 PRIMARY EXPERTISE

🧠 ADDITIONAL EXPERTISE

🎓 EDUCATION

Bachelor's degree

09/2013 - 06/2017 | Kapan, Armenia

National Polytechnic University of Armenia

Informatics and Applied Mathematics

COURSES

WEB3 Blockchain Course <i>Polytechnic</i>	Yerevan, Armenia
Python Intermediate Level <i>Armenian Code Academy</i>	Yerevan, Armenia
Cybersecurity <i>UEICT</i>	Yerevan, Armenia
Linux, QA, Python <i>Instigate Training Center</i>	Kapan, Armenia

LANGUAGES

English (Upper-Intermediate)

SELECTED PROJECTS

Blockchain Wallet and Web3 Integration 03/2022 – present

Project Description

Led the development and integration of backend services for a blockchain-based wallet system. The project focused on delivering robust and scalable microservices for blockchain interaction, data indexing, and secure wallet functionality using modern backend technologies and Web3 principles.

Position

Backend | Blockchain Developer

Technologies

Python, TypeScript, Go, FastAPI, Flask, Strawberry GraphQL, NestJS, ExpressJS, gRPC, Celery, BullMQ, PostgreSQL, Redis, Firebase, NATS, Docker, GitHub Actions, AWS, Jira, Confluence

Responsibilities:

- Designed, developed, and delivered **microservices** using **REST**, **GraphQL**, and **RPC** protocols for blockchain data handling and wallet functionality.
- Implemented secure and scalable backend services using **FastAPI**, **NestJS**, and **Strawberry GraphQL**.
- Engineered high-performance applications with **testable**, **reusable code**, maintaining code quality and scalability.
- Integrated **Web3 technologies**, contributing to seamless interaction with decentralized systems.
- Collaborated with DevOps to **optimize CI/CD pipelines** using GitHub Actions for streamlined deployments.
- Built and managed infrastructure services using **Docker**, **Redis**, **PostgreSQL**, **Firebase**, and **NATS**.
- Participated actively in **architectural design and product discussions**, contributing key technical insights.
- Ensured **robust unit testing coverage** for all major features and services.

Cloud Integration

11/2024 - present

Project Description

Worked on integrating and maintaining cloud services for Dutch ICT provider, ensuring seamless operations and scalability. The project focused on cloud infrastructure management, issue resolution, and deployment of new cloud products.

Position

Cloud DevOps Engineer

Technologies

Azure Cloud, Terraform, Kubernetes, Docker, CI/CD, Monitoring Tools, (Prometheus, Grafana), Networking (DNS, SIP), Backup Solutions

Responsibilities

- Maintained and optimized existing integrations on Azure Cloud, ensuring high availability and performance.
- Investigated and resolved cloud integration issues to enhance system reliability.
- Designed and implemented infrastructure for new cloud products, including domains, backup solutions, and SIP services.
- Automated deployments and infrastructure provisioning using CI/CD pipelines.
- Monitored system health and security, implementing necessary optimizations.
- Collaborated with cross-functional teams to align cloud strategies with business goals.

Open-Source Project

01/2022 - 10/2024

Project Description

Spearheaded the development of the open-source project designed to provide a seamless experience for gaming enthusiasts. Built with Python, Django, GraphQL, PostgreSQL, and Docker, this initiative aimed to democratize access to game-related data.

Position

Software Engineer

Technologies

Python, Django, FastAPI, Strawberry GQL, SQLAlchemy, NextJs, PostgreSQL, Git, Docker | Docker-compose

Responsibilities

- Create Open-Source project, make project discussion sessions with members of community.
- Developed and maintained back-end software, ensuring code integrity and scalability.
- Created a diverse set of unit tests to validate software functionality.
- Actively participated in architectural, design, and product discussions, contributing valuable insights.
- Manage self-hosted services.

Self-Hosted Home Lab Web Server Setup

2022

Project Description

Designed and deployed a fully self-hosted home lab web server, leveraging a stable internet connection with a static IP and a high-performance custom-built server. The setup provided a secure, automated, and manageable environment for hosting and deploying personal services efficiently.

Position

DevOps Engineer (Personal Project)

Technologies

Ubuntu Server 22.04, Docker, Portainer, GitHub CI/CD, WireGuard VPN, Nginx Proxy Manager, Cloudflare, AdGuard Home, PostgreSQL, Redis, OpenTelemetry/Jaeger

Technical Setup:

- Hardware: Intel i5 (12-core), 16GB RAM, 256GB NVMe SSD, 1TB storage.
- OS & Core Software: Ubuntu Server 22.04 with Docker & Portainer for container management.
- CI/CD & Automation: Integrated GitHub CI/CD for seamless auto-deployment of personal repositories.

Networking & Security:

- Configured private DNS with AdGuard Home for secure and ad-free browsing.
- Set up Nginx Proxy Manager with Cloudflare SSL for secure domain management.
- Deployed WireGuard VPN to restrict access to specific services for enhanced security.

Key Benefits & Achievements:

- Secure & Manageable Self-Hosted Services - Built a private cloud environment with controlled access.
- Quick & Automated Deployments - Hosted essential services like PostgreSQL, Redis, OpenTelemetry/Jaeger for logging and monitoring
- Hands-on Home Lab Experience - Gained in-depth knowledge of self-hosted infrastructure, networking, and deployment best practices.

Training Company Site

08/2022 - 08/2023

Project Description

Train competitive IT specialists on the spot.

Position

Software Engineer

Technologies

Python, Django, GraphQL, Next JS, Urql, Docker, Self-Hosted, Linux Server

Responsibilities

- Developed and maintained the training company website using Python, Django, and GraphQL.
- Enhanced frontend functionality with Next.js and Urql for a seamless user experience.
- Containerized applications with Docker for consistent deployment.
- Managed a self-hosted Linux server supporting IT infrastructure.
- Contributed to strategic technology decisions aligned with business objectives.
- Collaborated in creating a conducive learning environment for IT specialists.

Blockchain indexers for Binance Beacon chain

03/2022 - 01/2023

Project Description

The heartbeat of triggering systems, leverage the Blockchain node to capture new blocks and meticulously store details about block transactions and address balances.

Position

Software Engineer

Technologies

Python, FastAPI, NestJS, Strawberry GraphQL, SQLAlchemy, gRPC, PostgreSQL, Redis, NATS, Git, Linux, Docker | docker-compose

Responsibilities

- Designed, built, and delivered microservices using REST, GraphQL, and RPC technologies.
- Developed and maintained back-end software, ensuring code integrity and scalability.
- Engineered high-performance applications through the creation of testable, reusable, and efficient code.
- Resolved unique, large-scale, and highly complex technical problems to enhance system robustness.
- Created a diverse set of unit tests to validate software functionality.
- Actively participated in architectural, design, and product discussions, contributing valuable insights.

- Collaborated with the DevOps team to establish and optimize CI/CD pipelines.

Next generation Digital Media NFT marketplace

05/2021 - 03/2022

Project Description

Next generation Digital Media NFT marketplace seeking to offer a brand new way of experiencing Crypto Art while simultaneously supporting and promoting artists for their contributions. We are built on the Algorand, one of the fastest and most efficient blockchains to date allowing us to facilitate purchases and track ownership of assets, with significantly reduced fees and a smaller carbon footprint.

Position

Software Engineer

Technologies

Python, Django, Rest Framework, Django Channels, Algorand, PostgreSQL, Docker, Digital Ocean, Services

Responsibilities

- Designed and Developed Rest APIs using Django/Rest Framework to create an NFT Market on Algorand Blockchain.
- Implemented JWT authentication with Django Simple JWT and introduced customizations to enhance API security.
- Integrated DigitalOcean Spaces as Main and Media cache storages for the NFT Market.
- Developed Django Channels to build a robust Notifications System.
- Implemented Celery tasks to track and parse NFTs from Algorand Blockchain using User Wallet addresses.

API Integration test projects

03/2019 - 05/2021

Project Description

Released test automation projects for the API testing. The projects have complex algorithms like comparing two different microservices. The complexity is that the microservices have a different JSON responses and JSON paths and also some additional recursive requests.

Position

Software Engineer

Technologies

Python, Java, PyTest, Multiprocessing, AsyncIO, Pandas, GoogleSheet API, Aallure Report, Testrail API, Linux, Git, Postman

Responsibilities

- Developed an automation framework for testing REST and GraphQL APIs.
- Integrated TestRail, Allure, and Google Sheets as third-party services to generate comprehensive reports on testcase run results.
- Created API mappings files to compare paths from two different JSON files effectively.
